RF receiver adapter	TXA4

Operating Guide

TXZ remote control functions and operation instructions

● Pairing

The RF receiver product is powered on within 7 seconds (the operation mode is determined by the receiver product), and the learning can be performed by pressing any button on the remote control. After the learning is successful, the actuator can move. After the receiving product is powered off, whether it needs to be re-learned depends on the receiving product.

● Lock button

Press the red lock button on the rear side of the remote control to lock the buttons on the front side. The red LED on the front side will flash 4 times to show that buttons are locked. To unlock, simply press the red lock button one more time, 4 flashes of the green LED will follow to show that it's now in unlock mode. Please press the lock button to unlock, whenever the batteries are changed.

● RF2.4GHz channel switching function

This device might be interfered by some other devices with same frequency (2.4 GHz; eg. WIFI router or WIFI hub).
If so, please move any port of the dip switch in the battery compartment to change channel and pair the remote control with the TXA4 adapter one more time.
